Integrated deformation states and magnetic-response explanation

Same native time t=62.839 s

(a) Compliant body and embedded magnets

(b) Poses of the 25 magnets

Equal XYZ scale / mm; axis guides 10 mm

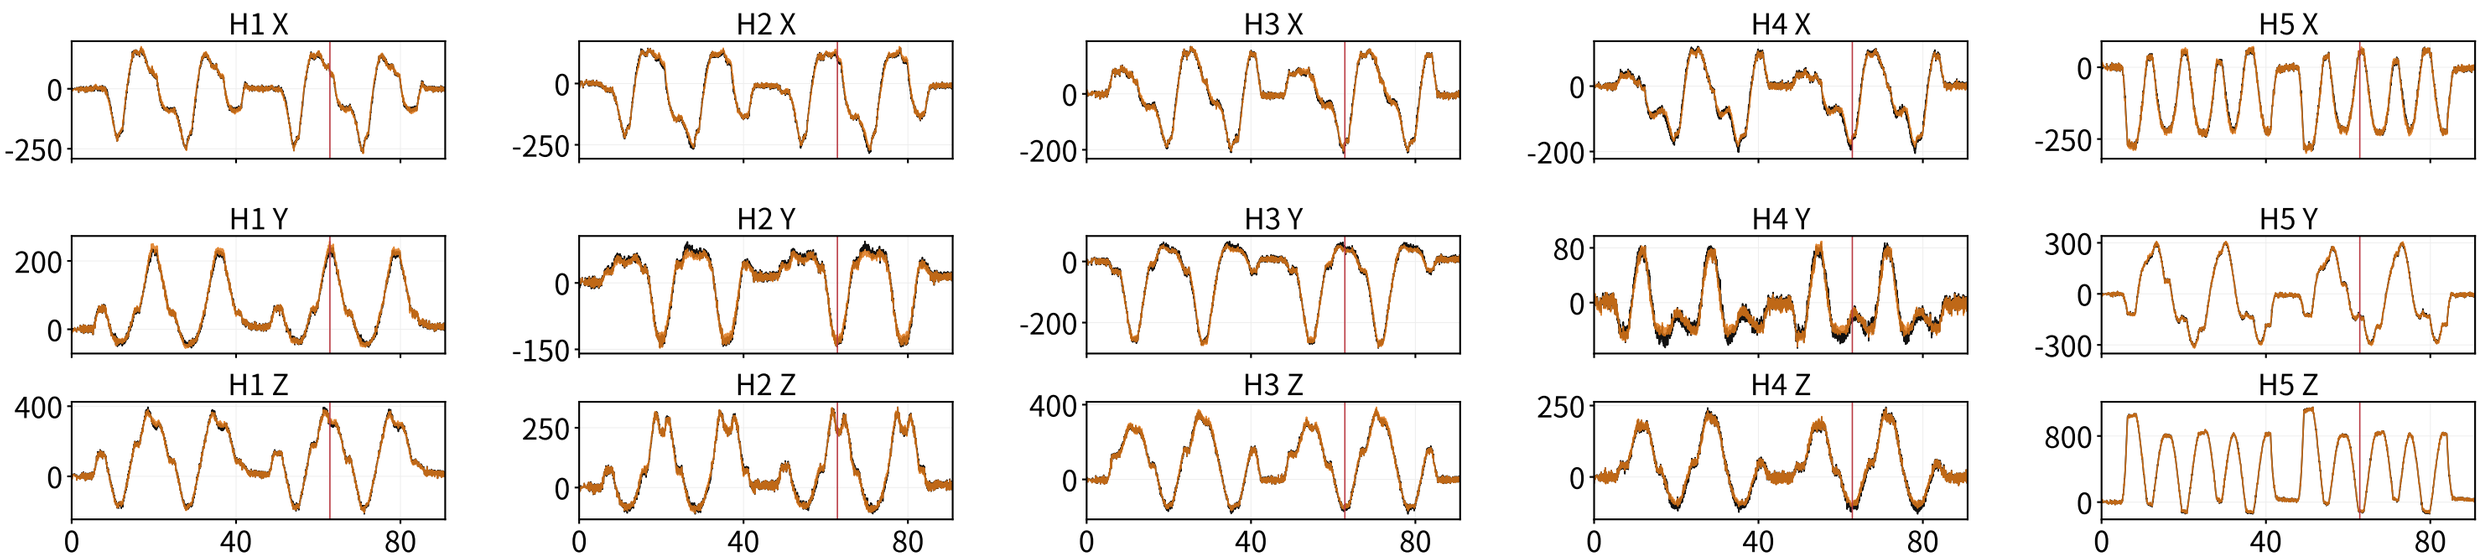

Displacement factor 1; estimates, not measurements

Surface displacement / mm

Discs: material colour; grey: nominal position

(c) All 15 channels: black measured, orange physical reconstruction; cursor matches the 3D state; time in s

XYZ in mm; displacement factor 1; fields in uT; deformation is a model estimate
